

Opening Influenza Research Community Trainer Certification Program

With the generous support of Flu Lab, the Center for Open Science (COS) is launching a pilot Open Science Community Trainer Certification Program to advance open science adoption in the influenza research community. The program will provide researchers who are open science early adopters in the flu community with skills, recognition, and support they need to raise awareness for open science and educate their peers and community members on how to practice open science in daily research.

Why Apply

Benefits and incentives of becoming a Certified Open Science Community Trainer:

- Get trained by experts
- Access to existing training materials
- Hone your skills on pedagogy and presentation
- Expand your network
- Boost your CV

Eligibility

Early to mid-career researchers in influenza or adjacent academic disciplines such as virology, public health, epidemiology, and the biosciences, with a basic knowledge and experience practicing open science / open scholarship, are encouraged to apply. Examples of open science practices include sharing data, code, and materials, preregistering research, publishing preprints, performing replication studies, and reporting null results.

The deadline to apply is June 23, 2023. Apply soon as space is limited.
